GitHub Copilot: Now with more.

We're excited to announce that agent mode is rolling out in Visual Studio Code.

Additionally, code review and a slew of models, including Anthropic Claude 3.5 and 3.7 Sonnet, OpenAI o3-mini, and Google Gemini 2.0 Flash are now generally available to all Copilot users.

What does this mean for you? Powerful, flexible, agentic AI integrated right into Copilot Chat—ready when you need it most.

Activate agent mode today

Be sure to update VS Code & enable in your settings.

Here's what's new:

Agent mode: Because two brains are better than one

In agent mode, Copilot gathers context across multiple files and external data sources like MCP servers, suggests and tests edits, and validates changes for

your approval—so you can make comprehensive updates with speed and accuracy. And yes, it all starts with a natural language prompt.

Code review: Your code's second pair of eyes

Assign Copilot to your pull request to identify vulnerabilities and errant behavior, and get suggestions on how to improve your code. Reduce toil on your reviewers—even if that's just you!—and focus your energy on more complex pieces of your pull requests.

Pick your brainpower

Anthropic Claude 3.5 and 3.7 Sonnet, Google Gemini 2.0 Flash, and other models are now generally available for all GitHub Copilot paid plans. Explore and experiment with [the best models for your workflow](#).

Introducing: GitHub Copilot Pro+

GitHub Copilot Pro+ offers all the benefits of GitHub Copilot Pro—and more. In addition to unlimited agent and chat requests with the Copilot base model and unlimited code completions, you can leverage all available premium models, and get access to other awesome models, including GPT-4.5, with 1,500 included premium requests each month, starting on May 5th. Even better: You'll get priority access to new models and early previews as we continue to evolve Copilot.

The best part: premium requests don't count against your quota until May 5. So go ahead and try out all the new features worry-free!
